

Why Fitzpatrick Mfg?

We combine the latest, most efficient CNC machines with our own innovative fixturing to speed throughput and lower costs

We are a single source manufacturer providing in-house CNC turning, CNC milling, and CNC surface grinding. We also have excellent sublet sources for OD/ID grinding, heat treating, deep hole drilling and part finishing.

Our 8 autonomous divisions are segmented by type of machining. Each division is its own entity, with leaders, machines, tooling, and dedicated employees. This specialization simplifies processing and improves quality, resulting in faster throughput and lower costs.

Fitzpatrick Mfg. can give you a competitive price, a precision product, and deliver it on time.

CNC Surface Grinding

We combine several operations into one, *reducing cycle time while improving quality.*

CNC Milling

One operator runs two machines simultaneously using innovative fixtures, allowing *faster throughput and lowering the unit cost.*
